

Kraft & Plastic Supplies Corp.

Introducing **GD** injection molding microwaveable containers. It has been engineered with revolutionary upgrades which make it stand out from the traditional containers on the market.

-Vent on Demand

An optional vent is equipped on each GD lid throughout the line. The end users can choose to leave it air-tight closed to contain temperature and moisture or easily break the vent for a completely different application. This is a revolutionary upgrade that makes one container capable to satisfy the operators from two opposite sides of the kitchen.

By consolidating vents and no-vents into a single SKU, space saving and workload reduction will be beneficial to the users.

-Heavy-Duty Ridged Structure.

The ridged side-wall design forged on both the lids and the containers. This design reinforces the sturdiness of the structure and increases high temperature tolerance.

-Leak Resistant

With a higher offset rim and a bigger retention lip, the lids and bottoms can be closed properly and securely.
